BUILT FOR
THE MOUNTAINS

Astur Climbing was born from the steep limestone of the Picos de Europa — one of Europe's most demanding vertical environments.

Every block, board, and support product we make is pressure-tested by athletes who climb at the sharp end of sport, trad, and competition.

Our philosophy is simple: precision engineering, honest materials, and modular design that grows with you. Whether you're rehabbing a pulley, maximising a training block, or building a portable board for a van trip through the Peaks, Astur has the system.

LIFTING BLOCKS

Precision edges for strength, progression, and longevity.

CLASSIC

CLASSIC DUO

Double-sided wooden lifting edge: 20mm & 10mm

The **Astur Classic Duo** is a compact wooden hangboard trainer designed for climbers who want real performance in a pocket-sized tool. With two precisely crafted wooden edges and an integrated jug, it's the ideal portable fingerboard for travel training, crag warmups, and focused hang workouts.

Two straight oak edges cover the full spectrum from comfortable warmup hangs to high-intensity max-hangs. The 20mm edge is ideal for open-hand strength work and extended sessions, while the 10mm edge targets precise crimp training and high-intensity loading. Each edge features a 5mm roundover, more skin-friendly than a flat edge, while actively promoting proper finger engagement for better strength development.

With contact points machined from solid hardwood and finished to a smooth, consistent surface, the **Classic Duo** delivers the tactile feedback climbers expect from wood. Natural texture, reliable friction, and a feel that improves with use.

Why the Classic Duo - Most portable hangboards sacrifice feel for size. The Classic Duo doesn't. Two perfectly balanced wooden edges in a body small enough to live in your chalk bag, it's the finger training tool you'll actually take everywhere.

SKU LE-C-02010

SPECIFICATIONS

MATERIALS	PLA & Red Oak
EDGE DEPTHS	20 mm / 10 mm
DIMENSIONS	25mm x 44mm x 120mm
WEIGHT	70 grams

CLASSIC

CLASSIC HYBRID

20mm Wood + 3DP Texture Edge for high friction

The ***Astur Classic Hybrid*** pairs a smooth natural oak edge with a precision-textured 3D-printed edge, delivering two fundamentally different grip experiences in a single pocket-sized trainer. Train on the familiar warmth of wood, then step up to the nuanced friction of engineered rock texture. Same 20mm depth. Completely different feel.

The oak side delivers the warm, consistent contact climbers know and trust, ideal for warmup hangs, repeaters, and longer sessions where comfort matters. The textured side features an intricate micro-grain surface designed with enough bite to challenge contact strength, refined enough to feel intentional under load.

Why the Classic Hybrid - If you already own a single-surface portable edge, the Hybrid gives you something it cannot. Genuine variety in a single tool. Warm up on wood, then switch to texture to train contact strength and friction response in the same session.

Disclaimer: Natural variations in grain, colour, and texture do not affect performance or durability.

SKU LE-C-H20

SPECIFICATIONS

MATERIALS	PLA & Red Oak
EDGE DEPTHS	20 mm oak / 20 mm 3D texture
DIMENSIONS	25mm x 44mm x 120mm
WEIGHT	70 grams

CLASSIC

CLASSIC NANO

20mm premium wood edge in the most portable platform

The ***Astur Classic Nano*** is built for climbers who want zero excuses for skipping a session, the smallest tool in the Astur range strips portable finger training down to the essentials: one precision oak edge, about 30 g, small enough to disappear in a pocket.

Whether it's a five-minute session between routes, a warmup before a trip to the wall, or the one piece of kit you never leave behind, the Classic Nano is there when a full setup isn't.

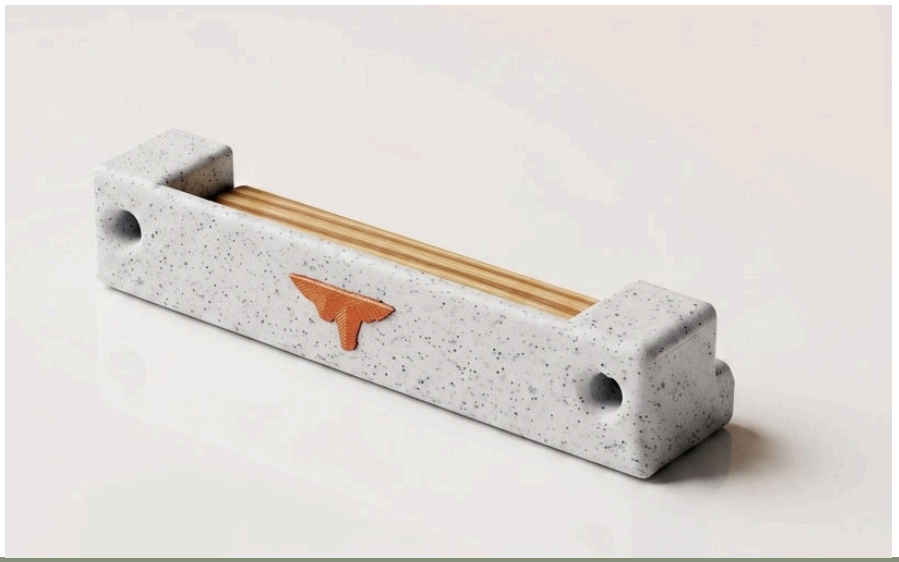

Why the Classic Nano - Every other portable edge asks you to carry a compromise. The Nano doesn't, it just asks you to carry less. One edge, one job, done properly, in the smallest possible footprint.

Disclaimer: Natural variations in grain, colour, and texture do not affect performance or durability.

SKU LE-C-N20-WHI

SKU LE-C-N20-BLK

SPECIFICATIONS

MATERIALS	PLA & Red Oak
EDGE DEPTHS	20 mm oak
DIMENSIONS	25mm x 30mm x 106mm
WEIGHT	30 grams

ERGO

ERGO VDE

20mm Straight Wood + 20mm Variable Depth 3DP Edge

The ***Astur Ergo VDE*** combines a natural oak straight edge with a curved ergonomic edge in one compact, lightweight trainer. Two 20mm edges, one for precision grip training and one for joint-friendly comfort, giving you the versatility to train hard and recover well without carrying two tools.

Designed for climbers who understand that sustainable training is built on smart load management, the ***Ergo VDE*** adapts to how your body feels on any given day. Push hard on the straight edge when fresh. Shift to the curved side when managing load or easing into a session.

Why the Ergo VDE - Straight edges train strength. Curved edges protect joints. The Ergo VDE gives you both, so you can push when you are fresh and manage load when you are not, all with one tool in your chalk bag.

Disclaimer: Natural variations in grain, colour, and texture do not affect performance or durability.

SKU LE-E-VDE

SPECIFICATIONS

MATERIALS	PLA & Red Oak
EDGE DEPTHS	20 mm / 20mm variable depth
DIMENSIONS	35mm x 44mm x 120mm
WEIGHT	90 grams

ERGO

ERGO STEP

20mm Stepped Edge (Wood) for progressive loading

The **Astur Ergo Step** is a lifting block engineered around one goal: putting every finger into a perfect half crimp at the same time. A stepped edge profile matches the natural length differences between fingers, so the index, middle, ring, and little finger all contact the wood at exactly 20mm depth simultaneously. No compromises, no finger lagging behind or reaching further than the others.

Most lifting blocks treat all fingers the same. **The Ergo Step** treats them as what they are, four different lengths that need four different positions. The result is a cleaner, more symmetrical loading position and a training stimulus that applies equally across the whole hand, session after session.

Why the Ergo Step - Half crimp is the most trainable and transferable grip position in climbing. The Ergo Step is the first lifting block designed to put every finger into it at once, correctly, every single rep.

Disclaimer: Natural variations in grain, colour, and texture do not affect performance or durability.

SKU LE-E-S-30P-WHI

SKU LE-E-S-30P-BLK

SKU LE-E-S-WD-WHI

SKU LE-E-S-WD-BLK

SPECIFICATIONS

MATERIALS	PLA, Red Oak & Carbon Fibre
STEP DEPTH	20 mm with steps
DIMENSIONS	25mm x 75mm x 115mm
WEIGHT	95 grams

ERGO

ERGO OFFSET

20mm Stepped + Offset Edge (Wood) for technical training

The ***Astur Ergo Offset*** takes the stepped finger-length profile of the Ergo Step and adds a second dimension. Each step is not only positioned to match finger length, it is also offset in depth to follow the natural curve of a relaxed hand. The result is a 20mm edge that conforms to the shape of your hand rather than asking your hand to conform to it.

Every step remains at 20mm contact depth, achieved through precise lateral offsets that mirror the arc your fingers naturally form when hanging. The middle finger sits forward, the index and ring fingers step back to their natural positions, and the little finger follows its own shorter arc. All four fingers arrive at the same depth, the same grip angle, and the same half crimp position, with no reaching, no tucking, and no tension from trying to match a geometry that was never designed for a human hand.

Why the Ergo Offset - Comfort in training is not a luxury, it is a signal that the loading is correct. The Ergo Offset is built for climbers who want the most natural, repeatable half crimp position available in a lifting block, and are willing to train with the precision to match.

Disclaimer: Natural variations in grain, colour, and texture do not affect performance or durability.

SKU LE-E-O-3DP-WHI

SKU LE-E-O-3DP-BLK

SKU LE-E-O-WD-WHI

SKU LE-E-O-WD-BLK

SPECIFICATIONS

MATERIALS	PLA, Red Oak & Carbon Fibre
EDGE DEPTHS	20 mm with steps and offset
DIMENSIONS	40mm x 70mm x 125mm
WEIGHT	130 grams

FORGE

FORGE BLOCK

Metal Backplate + Hybrid Edge System (Modular)

The **Astur Forge Block** is a precision-engineered modular hangboard unit built around a machined metal backplate and interchangeable wooden contact edges, giving you the rigidity and consistent feel of a fixed board in a compact, portable format. Use it as a single-hand edge, or connect two units with a carbon rod to build a full two-hand portable fingerboard.

The precision-machined metal backplate eliminates the flex found in plastic and composite boards, delivering a rock-solid feel under load session after session. The 20mm edge features a 3D-printed internal structure with a real wood contact surface, combining the skin-friendly feel of wood with the dimensional accuracy of modern manufacturing. Available in multiple colours, every edge shares identical geometry and performance.

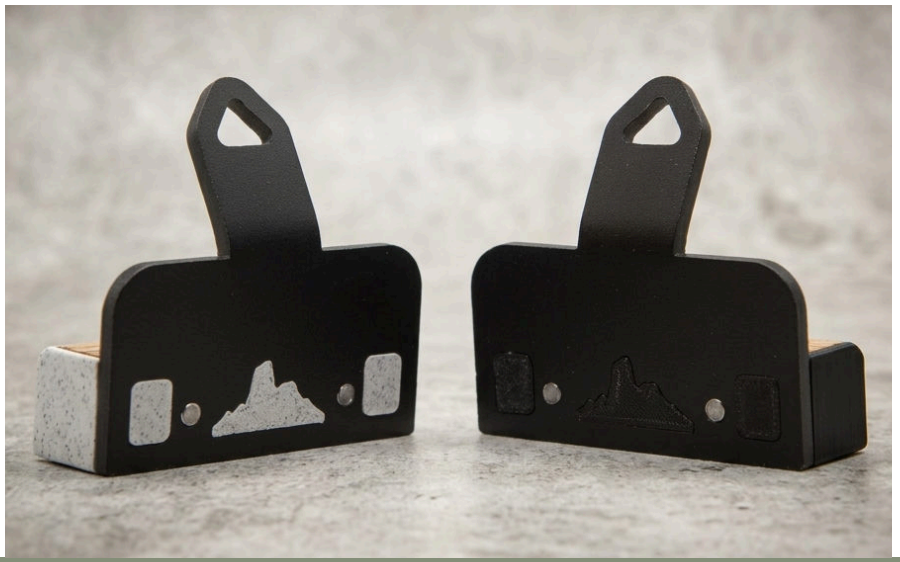

Why the Forge Block - Most portable edges are fixed tools. The Forge Block is a system, one that grows with your training, adapts to your goals, and never asks you to compromise between portability and performance.

Disclaimer: Natural variations in grain, colour, and texture do not affect performance or durability.

SKU LE-FG-WD-WHI

SKU LE-FG-WD-BLK

SPECIFICATIONS

BACKPLATE	Stainless Steel
COMPATIBLE INSERTS	Wood, 3DP, Forge series
DIMENSIONS	25mm x 75mm x 80mm
WEIGHT	130 grams

FINGERBOARD SYSTEMS

Complete training platforms for anywhere you climb.

NOMAD

NOMAD CLASSIC

Full size Fingerboard: Carbon Core + Duo Blocks

The ***Astur Nomad Classic*** transforms two pocket-sized climbing blocks into a complete, full-width portable fingerboard in seconds, using a precision carbon fibre connector with no tools required. At just 186g for the carbon version, it's the lightest full-size portable fingerboard available.

Featuring two classic fingerboard edges, the ***Nomad Classic*** offers both a 20mm and 10mm straight edge, each with a comfortable rounded radius and crafted from premium red oak for the familiar feel and friction of a traditional wooden hangboard. Use each block independently for single-hand training or connect them with the carbon rod to create a full-width two-hand fingerboard. The rounded back of each unit also serves as an integrated jug for pull-ups and recovery hangs.

Why the Nomad Classic - Traditional fingerboards are heavy, fixed, and require permanent installation. The Nomad delivers uncompromising hangboard performance in the lightest full-size portable system available, small enough to fit in your carry-on. Whether you're travelling, warming up at the crag, or training on the go, the Nomad ensures your fingerboard is always within reach.

Disclaimer: Natural variations in grain, colour, and texture do not affect performance or durability.

SKU FB-NMC-W

SPECIFICATIONS

RAIL MATERIAL	Carbon fibre & Aluminium
RAIL LENGTH	40 cm
WEIGHT	186 grams (without cord)
EDGES	20mm / 10mm

NOMAD

NOMAD ERGO VDE

Full size Fingerboard: Carbon Core + VDE Blocks

The ***Astur Nomad Ergo VDE*** transforms two pocket-sized climbing blocks into a complete, full-width portable fingerboard in seconds, using a precision carbon fibre connector with no tools required. At just 225g for the carbon version, it's one of the most compact and lightweight full-size portable fingerboards available.

Each edge offers a distinct grip surface: a 20mm curved ergonomic edge with a smooth radius for joint-friendly hangs, warm-ups, and rehab training, alongside a 20mm natural oak edge for the classic wooden hangboard feel. Use them independently for single-hand training or connect them with the carbon rod to create a full-width two-hand fingerboard. The rounded back of each unit also provides an integrated jug for pull-ups and recovery hangs.

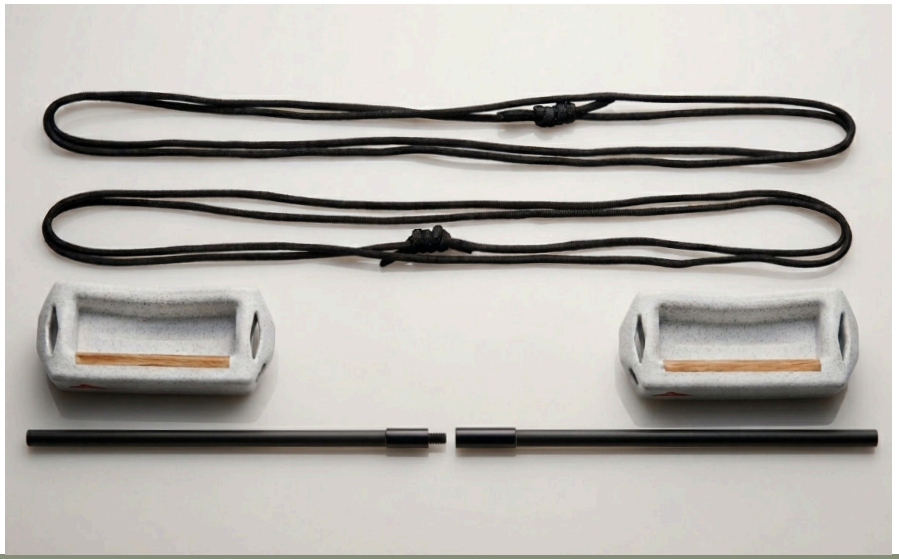

Why the Nomad Ergo VDE - Traditional fingerboards are heavy, fixed, and require permanent installation. The Nomad Ergo delivers the functionality of a full-size hangboard in an ultralight, travel-friendly system that fits easily into your carry-on. It's designed for climbers who take their training seriously and don't want to leave their hangboard at home.

Disclaimer: Natural variations in the wood grain, colour, and texture are part of the material's character and do not affect performance or durability.

SKU FB-NMERG-W

SPECIFICATIONS

RAIL MATERIAL	Carbon fibre & Aluminium
RAIL LENGTH	40 cm
WEIGHT	225 grams (without cord)
EDGES	20mm / 20mm variable depth

NOMAD

NOMAD FORGE

Full size Fingerboard: Carbon Core + Forge Blocks

The ***Astur Nomad Forge*** expands the Forge system into a full two-hand portable fingerboard, connected by a carbon fibre rod for a rigid, stable, zero-swing training platform that travels anywhere. With dual precision-machined metal backplates and a fully interchangeable edge system, it is the most capable portable fingerboard Astur makes.

Unlike cord-connected systems that move under load, the carbon fibre rod joins the two units into a full-width fingerboard with zero swing and zero bounce, giving you the stable, symmetrical feel of a wall-mounted hangboard wherever you train. Standard 20mm wooden contact edges are included, but the platform accepts precision metal edges and premium exotic hardwood edges for climbers who want the finest contact surfaces available.

Why the Nomad Forge - The Nomad Classic is the lightest portable fingerboard. The Nomad Forge is the best. Metal stiffness, interchangeable edges, carbon stability, in a format that travels. One platform. Infinite configurations. Uncompromised performance.

Disclaimer: Natural variations in grain, colour, and texture do not affect performance or durability.

SKU FB-NMFG-WHI

SKU FB-NMFG-BLK

SPECIFICATIONS

RAIL MATERIAL	Carbon fibre & Aluminium
RAIL LENGTH	40 cm
WEIGHT	300 grams (without cord)
EDGES	20mm interchangeable

SUPPORT & RECOVERY

Train hard. Recover smart. Stay on the wall.

RECOVERY

PULLEY SPLINTS

Set of 3D Printed Finger Supports/ Splints

Astur finger pulley splints are purpose-designed for climbers managing A2 and A4 pulley injuries, the most common finger injuries in climbing. Anatomically targeted to replicate the mechanical function of the injured pulley, they provide direct tendon support without restricting circulation, nerve function, or the rest of your hand.

Pulley splints work by holding the flexor tendon close to the bone, replicating the mechanical role of the damaged A2 or A4 pulley. Unlike tape or full-coverage supports, Astur splints apply targeted compression only where it is needed, leaving blood flow, nerve sensation, and finger mobility intact. Breathable, lightweight, reusable, and washable, built for long-term rehab use rather than single-session taping.

Why the Pulley Splints - Most climbing finger supports either restrict too much or support too little. Astur splints are engineered specifically for pulley injuries, targeting only the damaged structure while leaving everything else free to function.

Disclaimer: These splints are a training and recovery aid and do not replace professional medical advice. Consult a physiotherapist or sports medicine professional for diagnosis and treatment.

SKU AC-PSS

SKU AC-PSS-C

SPECIFICATIONS

REGULAR SET	8 splints sized 12mm to 19mm
CUSTOM SET	5 splints of any size
TARGET PULLEYS	A2 / A4
